

Java

```
class Solution {  
    public List<String> findRepeatedDnaSequences(String s) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} s  
 * @return {string[]}  
 */  
var findRepeatedDnaSequences = function(s) {  
  
};
```

TypeScript

```
function findRepeatedDnaSequences(s: string): string[] {  
  
};
```

C++

```
class Solution {  
public:
```

```
vector<string> findRepeatedDnaSequences(string s) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public IList<string> FindRepeatedDnaSequences(string s) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun findRepeatedDnaSequences(s: String): List<String> {  
    }  
}
```

Go

```
func findRepeatedDnaSequences(s string) []string {  
}
```
